		[
	The mapping $w = z + \frac{1}{z}$		
	Properties of $w = \frac{1}{7}$	1	
	Circles and straight lines, extended complex plane, fixed points		
	Special linear fractional Transformations, Cross Ratio, Cross Ratio property-Mapping of disks and half planes	3	
	Conformal mapping by $w = \sin z \& w = \cos z$	3	
	(Assignment: Application of analytic functions in Engineering)	1	
	FIRST INTERNAL EXAMINATION		
	Complex Integration. Text 1[14.1-14.4] [15.4&16.1]		
	Definition Complex Line Integrals, First Evaluation Method, Second Evaluation Method	2	
	Cauchy's Integral Theorem(without proof), Independence of path(without proof), Cauchy's Integral Theorem for Multiply Connected Domains (without proof)	2	15%
III	Cauchy's Integral Formula- Derivatives of Analytic Functions(without proof)Application of derivative of Analytical Functions	2	
	Taylor and Maclaurin series(without proof), Power series as Taylor series, Practical methods(without proof)	2	
	Laurent's series (without proof)	2	
	Residue Integration Text 1 [16.2-16.4] Singularities, Zeros, Poles, Essential singularity, Zeros of analytic functions	2	15%
IV	Residue Integration Method, Formulas for Residues, Several singularities inside the contour Residue Theorem.	4	
	Evaluation of Real Integrals (i) Integrals of rational functions of	3	
	$\sin\theta$ and $\cos\theta$ (ii)Integrals of the type $\int_{-\infty} f(x) dx$ (Type I, Integrals		
	from 0 to ∞) (Assignment : Application of Complex integration in Engineering)		
	SECOND INTERNAL EXAMINATION		
			20%
	Linear system of Equations Text 1(7.3-7.5)		
V	Linear systems of Equations, Coefficient Matrix, Augmented Matrix	1	
, v	Gauss Elimination and back substitution, Elementary row operations, Row equivalent systems, Gauss elimination-Three possible cases, Row Echelon form and Information from it.	5	

	Linear independence-rank of a matrix	2	
	Vector Space-Dimension-basis-vector space R ³		
	Solution of linear systems, Fundamental theorem of non- homogeneous linear systems(Without proof)-Homogeneous linear systems (Theory only	1	
	Matrix Eigen value Problem Text 1.(8.1,8.3 &8.4)		20%
	Determination of Eigen values and Eigen vectors-Eigen space	3	
VI	Symmetric, Skew Symmetric and Orthogonal matrices –simple properties (without proof)	2	
	Basis of Eigen vectors- Similar matrices Diagonalization of a matrix- Quadratic forms- Principal axis theorem(without proof)	4	
	(Assignment-Some applications of Eigen values(8.2))		
	END SEMESTER EXAM		1

QUESTION PAPER PATTERN:

Maximum Marks : 100

Exam Duration: 3 hours

The question paper will consist of 3 parts.

Part A will have 3 questions of 15 marks each uniformly covering modules I and II. Each question may have two sub questions.

Part B will have 3 questions of 15 marks each uniformly covering modules III and IV. Each question may have two sub questions.

Part C will have 3 questions of 20 marks each uniformly covering modules V and VI. Each question may have three sub questions.

2014

Any two questions from each part have to be answered.

	FIRST INTERNAL EXAMINATION		
III	Steady state and transient response – DC response &	9 hours	15%
	sinusoidal response of RL, RC and RLC series circuits		
IV	Application of Laplace transform in transient analysis – RL,	10	15%
	RC and RLC circuits (Series and Parallel circuits) – step and	hours	
	sinusoidal response		
	Transformed circuits – coupled circuits - dot convention -		
	transform impedance/admittance of RLC circuits with mutual	N.A.	
	coupling – mesh analysis and node analysis of transformed	IV1	
	circuits - solution of transformed circuits including mutually	A Y	
	coupled circuits in s-domain		
	SECOND INTERNAL EXAMINATION	A hard	
V	Two port networks – Z, Y, h, T parameters – relationship	9 hours	20%
	between parameter sets – condition for symmetry &		
	reciprocity – interconnections of two port networks – driving		
	point and transfer immittance – T- π transformation.		
VI	Network functions–Network synthesis-positive real functions	8 hours	20%
	and Hurwitz polynomial-synthesis of one port network with		
	two kinds of elements-Foster form I&II-Cauer form I&II.		
	END SEMESTER EXAM		

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI. Student has to answer all questions. (8 x5)=40

Part B: 3 questions uniformly covering modules I&II

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part C: 3 questions uniformly covering modules III&IV

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part D: 3 questions uniformly covering modules V&VI

014

Student has to answer any 2 questions: $(2 \times 10) = 20$

Course Plan					
Module	Contents	Hours	Sem.ExamMarks		
	Diode Circuits : Diode clipping circuits - Single level and two level clippers - Clamping circuits – Design of Zener Voltage Regulators.				
Ι	Bipolar Junction Transistors : Review of BJT characteristics- Operating point of a BJT – Factors affecting stability of Q point and DC Biasing – Biasing circuits: fixed bias, collector to base bias, voltage division bias and self bias. (Derivation of stability factors for Voltage Divider Biasing only) –Bias compensation using diode and thermistor.	9 hours			
	Emitter amplifier - AC Equivalent Circuit – Role of coupling and emitter bypass capacitors – h parameter model of BJT -Amplifier gains and impedances calculations using h equivalent circuit.		15%		
П	Field Effect Transistors : Review of JFET and MOSFET construction, working and characteristics- Biasing a JFET and MOSFET using voltage divider bias CS and CD amplifiers – small signal models-FET as switch and voltage controlled resistance. Frequency response of Amplifiers : Miller's Theorem- BJT Internal Capacitances at high frequency operations- High frequency analysis of CE Amplifier using hybrid Pi	9 hours			
	Model -Low Frequency Response of Common Emitter amplifier CE High frequency response-Gain bandwidth productLow and High Frequency response of FET amplifiers		15%		
	FIRST INTERNAL EXAMINATION		4 = 0 (
III	Multistage amplifiers : Direct, RC, transformer coupledamplifiers –Power amplifiers using BJT : Class A, Class B and ClassAB and class C- Conversion efficiency and distortion inpower amplifiers.Feedback Amplifiers- Effect of positive and negativefeedbacks- Basic feedback topologies and their properties	8 hours	15%		
IV	Oscillators : Bark Hausen's criterion – RC oscillators (RC Phase shift oscillator and Wein Bridge oscillator) –LC oscillators (Hartley and Colpitt's)- Derivation of frequency of oscillation for the above mentioned oscillators- Crystal oscillator.	8 hours	15%		

	Operational Amplifiers : Review of Operational Amplifier basics - Analysis of fundamental differential amplifier- Properties of ideal and practical Op-Amp - Gain, CMRR and Slew rate of IC 741 and LM 301– Drift and frequency compensation in OP Amps- Open loop and Closed loop Configurations-Concept of virtual short and its relation to negative feedback		
	SECOND INTERNAL EXAMINATION	N.A.	
V	 OP-AMP Circuits : Review of inverting and non- inverting amplifier circuits- Summing and difference amplifiers, Differentiator and Integrator circuits- Logarithmic amplifier- Half Wave Precision rectifier - Instrumentation amplifier. Comparators: Zero crossing and voltage level detectors, Schmitt trigger. 	AL 8hours	20%
VI	Wave form generation using Op-Amps: Square, triangular and ramp generator circuits using Op-Amp - Effect of slew rate on waveform generation. Timer 555 IC : Internal diagram of 555 IC- Astable and Monostable multivibrators using 555 IC. Oscillator circuits using Op-amps : RC Phase shift oscillator, Wein Bridge oscillator, LC Oscillators-(Derivation not required) - Crystal oscillator.	8 hours	20%

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI. Student has to answer all questions. (8 x5)=40

Part B: 3 questions uniformly covering modules I&II

2014

Estd.

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part C: 3 questions uniformly covering modules III&IV

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part D: 3 questions uniformly covering modules V&VI

Student has to answer any 2 questions: $(2 \times 10) = 20$

		Credits	Introduction					
HS210	LIFE SKILLS	2-0-2	2016					
Course Object	Course Objectives							
• To deve	elop communication competence in prospectiv	ve engineers.						
To enable	ble them to convey thoughts and ideas with cla	arity and focus.						
• To deve	elop report writing skills.							
• To equi	p them to face interview & Group Discussion							
• To incu	lcate critical thinking process.							
To prep	are them on problem solving skills.							
• To prov	vide symbolic, verbal, and graphical interpr	retations of sta	atements in a problem					
descript	tion.							
• To unde	erstand team dynamics & effectiveness.							
To crea	te an awareness on Engineering Ethics and Hu	uman Values.						
To insti	• To instill Moral and Social Values, Loyalty and also to learn to appreciate the rights of							
others.	others.							
• To learn leadership qualities and practice them.								
Syllabus								

Communication Skill: Introduction to Communication, The Process of Communication, Barriers to Communication, Listening Skills, Writing Skills, Technical Writing, Letter Writing, Job Application, Report Writing, Non-verbal Communication and Body Language, Interview Skills, Group Discussion, Presentation Skills, Technology-based Communication.

Critical Thinking & Problem Solving: Creativity, Lateral thinking, Critical thinking, Multiple Intelligence, Problem Solving, Six thinking hats Mind Mapping & Analytical Thinking.

Teamwork: Groups, Teams, Group Vs Teams, Team formation process, Stages of Group, Group Dynamics, Managing Team Performance & Team Conflicts.

Ethics, Moral & Professional Values: Human Values, Civic Rights, Engineering Ethics, Engineering as Social Experimentation, Environmental Ethics, Global Issues, Code of Ethics like ASME, ASCE, IEEE.

Leadership Skills: Leadership, Levels of Leadership, Making of a leader, Types of leadership, Transactions Vs Transformational Leadership, VUCA Leaders, DART Leadership, Leadership Grid & leadership Formulation.

Expected outcome

- Communicate effectively.
- Make effective presentations.
- Write different types of reports.
- Face interview & group discussion.
- Critically think on a particular problem.
- Solve problems.
- Work in Group & Teams
- Handle Engineering Ethics and Human Values.
- Become an effective leader.

	Course Plan					
Module	Contents	Hours L-T-P T P				Sem. Exam Marks
	Need for Effective Communication, Levels of communication; Flow of communication; Use of language in communication; Communication networks; Significance of technical communication, Types of barriers; Miscommunication; Noise; Overcoming measures,	2				
	Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills.		2			
I	Technical Writing: Differences between technical and literary style, Elements of style; Common Errors, Letter Writing: Formal, informal and demi-official letters; business letters, Job Application : Cover letter, Differences between bio-data, CV and Resume, Report Writing: Basics of Report Writing; Structure of a report; Types of reports.		4			
	Non-verbal Communication and Body Language: Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language	3				
	Interview Skills: Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication, Group Discussion: Differences between group discussion and debate; Ensuring success in group discussions, Presentation Skills: Oral presentation and public speaking skills; business presentations, Technology-based Communication: Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software.		4			
II	Need for Creativity in the 21 st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of creativity	2				

				ı
	Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.		2	
	Steps in problem solving, Problem Solving Techniques, Problem Solving through Six Thinking Hats, Mind Mapping, Forced Connections.	2		
	Problem Solving strategies, Analytical Thinking and quantitative reasoning expressed in written form, Numeric, symbolic, and graphic reasoning, Solving application problems.		2	
	Introduction to Groups and Teams, Team Composition, Managing Team Performance, Importance of Group, Stages of Group, Group Cycle, Group thinking, getting acquainted, Clarifying expectations.	3		
	Group Problem Solving, Achieving Group Consensus.		2	
III	Group Dynamics techniques, Group vs Team, Team Dynamics, Teams for enhancing productivity, Building & Managing Successful Virtual Teams. Managing Team Performance & Managing Conflict in Teams.	3		
	Working Together in Teams, Team Decision-Making, Team Culture & Power, Team Leader Development.		2	
	Morals, Values and Ethics, Integrity, Work Ethic, Service Learning, Civic Virtue, Respect for Others, Living Peacefully.	3		
	Caring, Sharing, Honesty, Courage, Valuing Time, Cooperation, Commitment, Empathy, Self-Confidence, Character,		2	
IV	Spirituality, Senses of 'Engineering Ethics', variety of moral issued, Types of inquiry, moral dilemmas, moral autonomy, Kohlberg's theory, Gilligan's theory, Consensus and controversy, Models of Professional Roles, Theories about right action, Self-interest, customs and religion, application of ethical theories.	3		
	Engineering as experimentation, engineers as responsible experimenters, Codes of ethics, Balanced outlook on.	3		
	The challenger case study, Multinational corporations, Environmental ethics, computer ethics,		2	
	Weapons development, engineers as managers, consulting			

	engineers, engineers as expert witnesses and advisors, moral leadership, sample code of Ethics like ASME, ASCE, IEEE, Institution of Engineers(India), Indian Institute of Materials Management, Institution of electronics and telecommunication engineers(IETE), India, etc.	3		
	Introduction, a framework for considering leadership, entrepreneurial and moral leadership, vision, people selection and development, cultural dimensions of leadership, style, followers, crises.	4		
v	Growing as a leader, turnaround leadership, gaining control, trust, managing diverse stakeholders, crisis management Implications of national culture and multicultural leadership Types of Leadership, Leadership Traits.	2	2	
	Leadership Styles, VUCA Leadership, DART Leadership, Transactional vs Transformational Leaders, Leadership Grid, Effective Leaders, making of a Leader, Formulate Leadership		2	
	END SEMESTER EXAM			

EVALUATION SCHEME

Internal Evaluation

(Conducted by the College)

Total Marks: 100

Part – A

(To be started after completion of Module 1 and to be completed by 30th working day of the semester)

 Group Discussion – Create groups of about 10 students each and engage them on a GD on a suitable topic for about 20 minutes. Parameters to be used for evaluation is as follows;

(i)	Communication Skills	—	10 marks
(ii)	Subject Clarity	_	10 marks
(iii)	Group Dynamics	-	10 marks
(iv)	Behaviors & Mannerism	1s -	10 marks

(Marks: 40)

Part – B

(To be started from 31^{st} working day and to be completed before 60^{th} working day of the semester)

2. Presentation Skills – Identify a suitable topic and ask the students to prepare a presentation (preferably a power point presentation) for about 10 minutes. Parameters to be used for evaluation is as follows;

(i)	Communication Skills*	-	10 marks
(ii)	Platform Skills**	-	10 marks
(iii)	Subject Clarity/Knowledge	-	10 marks

(Marks: 30)

* Language fluency, auditability, voice modulation, rate of speech, listening, summarizes key learnings etc.

** Postures/Gestures, Smiles/Expressions, Movements, usage of floor area etc.

Part – C

(To be conducted before the termination of semester)

3. Sample Letter writing or report writing following the guidelines and procedures. Parameters to be used for evaluation is as follows;

(i)	Usage of English & Grammar	-	10 marks
(ii)	Following the format	-	10 marks
(iii)	Content clarity	-	10 marks

(Marks: 30)

Time: 2 hrs.

External Evaluation

(Conducted by the University)

Total Marks: 50

Part – A

Short Answer questions

There will be one question from each area (five questions in total) will be asked for the examination. Each question should be written in about maximum of 400 words. Parameters to be used for evaluation are as follows;

- (i) Content Clarity/Subject Knowledge
- (ii) Presentation style
- (iii) Organization of content

(*Marks*: $5 \times 6 = 30$)

Part – B

Case Study

The students will be given a case study with questions at the end the students have to analyze the case and answer the question at the end. Parameters to be used for evaluation are as follows;

- (i) Analyze the case situation
- (ii) Key players/characters of the case
- (iii) Identification of the problem (both major & minor if exists)
- (iv) Bring out alternatives
- (v) Analyze each alternative against the problem
- (vi) Choose the best alternative
- (vii) Implement as solution
- (viii) Conclusion
- (ix) Answer the question at the end of the case

(Marks: $1 \times 20 = 20$)

	END SEMESTER EXAM		

QUESTION PAPER PATTERN:

Maximum Marks : 100

Exam Duration: 3 hours

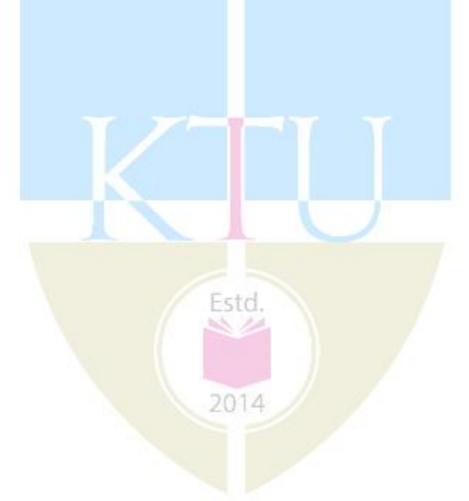

The question paper will consist of 3 parts.

Part A will have 3 questions of 15 marks each uniformly covering modules I and II. Each question may have two sub questions.

Part B will have 3 questions of 15 marks each uniformly covering modules III and IV. Each question may have two sub questions.

Part C will have 3 questions of 20 marks each uniformly covering modules V and VI. Each question may have three sub questions.

Any two questions from each part have to be answered.

Course No	Course Name	L-T-P-Credits	Year of	Introduction
EE202	Synchronous and Induction Machines	3-1-0-4		2016
Prerequisite	: NIL			
Course Ob	ojectives			
То	give exposure to the students about the co	oncepts of altern	ating curr	ent machines
includin	g the Constructional details, principle of opera	ation and perform	nance analy	ysis.
То	learn the characteristics of induction machines	s and to learn how	v it can be	employed for
various	applications.		N.A.	
Syllabus	APTABLIUL	KALA	IVI	
Alt	ernators - basic principle, constructional detai	ls, armature wind	lings, arma	ature reaction,
voltage	regulation and determination of regulation by	different metho	ds; paralle	l operation of
alternate	ors and synchronization; Synchronous motor	rs – principle, p	performanc	e and power
relations	; synchronous induction motors.	Y I I		
Ind	uction motors – basic principle, rotating	magnetic field,	construct	ional details,
mechani	cal power and torque, performance analys	sis, starting met	thods, brai	king, testing,
equivale	nt circuit and circle diagrams; single phase ind	duction motors.		
Ind	uction generator – principle of operation.			
Expected (Dutcome			
Aft	er the successful completion of this course, the	e students will be	able to	
	identify alternator types, and appreciate their			
2. determine the voltage regulation and analyse the performance of alternators

	slot angle, pitch factor and distribution factor – numerical problems.		
	Effect of pitch factor on harmonics – advantages of short chorded winding, EMF Equation – numerical problems.		
	Harmonics in generated EMF – suppression of harmonics.		
II	Performance of an alternator – Causes for voltage drop in alternators – armature resistance, armature leakage reactance – armature reaction, synchronous reactance, synchronous impedance, experimental determination – phasor diagram of a loaded alternator.	9 hours	15%
	Voltage regulation – EMF, MMF, ZPF and ASA methods –		
	numerical problems.		
	FIRST INTERNAL EXAMINATION		
III	Theory of salient pole machine – Blondel's two reaction theory – direct axis and quadrature axis synchronous reactances – phasor diagram and determination of X_d and X_q by slip test. Parallel operation of alternators – necessity of parallel operation of alternators, methods of synchronisation– dark	9 hours	15%
	lamp method and bright lamp method, synchroscope,Synchronising current, synchronising power,synchronising torque.Effects of changing excitation of alternators, load sharingof two alternators in parallel operation.		
IV	Synchronous motor – construction and principle of synchronous motor, methods of starting.Effects of excitation on armature current and power factor, v-curve and inverter v-curve, load angle, torque and power relationship, phasor diagram, losses and efficiency calculations.Three phase induction motor – constructional features, slip ring and cage types. Theory of induction motor with constant mutual flux, slip, phasor diagram, expression for mechanical power and torque, torque-slip characteristics, starting torque, full load and pull out torque, equivalent	9 hours	15%
	circuit.		
	SECOND INTERNAL EXAMINATION		
V	Circle diagrams – tests on induction motors for determination of equivalent circuit and circle diagram.	10 hours	20%

	Cogging, crawling and noise production in cage motors – remedial measures.
	Double cage induction motor – principle, torque-slip curves.
	Starting of induction motors – types of starters – DOL
	starter, autotransformer starter, star-delta starter, rotor resistance starter – starting torque and starting current- numerical problems. Braking of induction motors – plugging, dynamic braking and regenerative braking (no numerical problems).
	Speed control – stator voltage control, V/f control, rotor resistance control.
VI	Induction generator – principle of operation, grid connected and self excited operation, comparison of induction generator with synchronous generators.FrankSynchronous induction motor – principle of operation.10 hours20%
	theory, equivalent circuit, torque slip curve. Types of single phase induction motor – split phase, capacitor start, capacitor start and run types. Principle of shaded pole motor – applications.
	END SEM <mark>E</mark> STER EXAM

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI.

Estd.

Student has to answer all questions. (8 x5)=40

Part B: 3 questions uniformly covering modules I&II

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part C: 3 questions uniformly covering modules III&IV

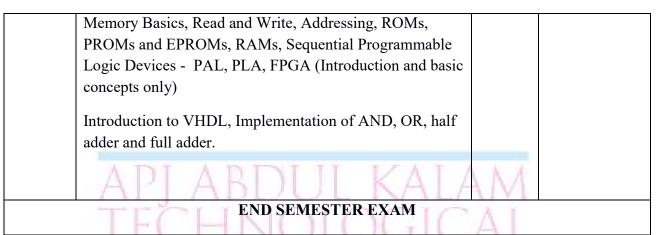

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part D: 3 questions uniformly covering modules V&VI

Student has to answer any 2 questions: $(2 \times 10) = 20$

	Course Plan		
Module	Contents	Hours	Sem.ExamMarks
I	Number Systems and Codes : Binary, Octal and hexadecimal conversions- ASCII code, Excess -3 code, Gray code, Error detection and correction - Parity generators and checkers – Fixed point and floating point arithmetic. Binary addition and subtraction, unsigned and signed numbers, 1's complement and 2's complement arithmetic.	7 hours	15%
II	TTL logic and CMOS logic - Logic gates, Universal gates - Boolean Laws and theorems, Sum of Products method, Product of Sum method – K map representation and simplification(upto four variables) - Pairs, Quads, Octets, Dont care conditions.	7 hours	15%
	FIRST INTERNAL EXAMINATION		
ш	Combinational circuits: Adders _ Full adder and half adder – Subtractors, halfsubtractor and fullsubtractor – Carry Look ahead adders – ALU(block diagram only). Multiplexers, Demultiplexers, Encoders, BCD to decimel decoders.	7 hours	15%
IV	 Sequential circuits: Flip-Flops, SR, JK, D and T flip-flops, JK Master Slave Flip-flop, Conversion of flip-flops, Registers -SISO,SIPO, PISO, PIPO. Counters : Asynchronous Counters – Modulus of a counter – Mod N counters. 	8 hours	15%
	SECOND INTERNAL EXAMINATION		
V	Synchronous counters: Preset and clear modes, CounterSynthesis: Ring counter, Johnson Counter, Mod N counter,Decade counter.State Machines: State transition diagram, Moore andMealy Machines – Design equation and circuit diagram.	7 hours	20%
VI	Digital to Analog conversion – R-2R ladder, weighted resistors. Analog to Digital Conversion - Flash ADC, Successive approximation, Integrating ADC.	8 hours	20%

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI.

Student has to answer all questions. $(8 \times 5)=40$

Part B: 3 questions uniformly covering modules I&II

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part C: 3 questions uniformly covering modules III&IV

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part D: 3 questions uniformly covering modules V&VI

Student has to answer any 2 questions: $(2 \times 10) = 20$

Note: Each question can have maximum of 4 sub questions, if needed.

	END SEMESTER EXAM	

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI. Student has to answer all questions. (8 x5)=40

Part B: 3 questions uniformly covering modules I&II.

Student has to answer any 2 questions: $(2 \times 10) = 20$

Part C: 3 questions uniformly covering modules III&IV. Student has to answer any 2 questions: $(2 \times 10) = 20$

Part D: 3 questions uniformly covering modules V&VI. Student has to answer any 2 questions: $(2 \times 10) = 20$ **Note:** Each question can have maximum of 4 sub questions, if needed.

	FIRST INTERNAL EXAMINATION		
III	Introduction to high voltage and high current measurements: Measurement of high DC voltages - measurement of high AC voltages - electrostatic voltmeters – sphere gaps - DC Hall effect sensors - high current measurements. Study of Phasor Measurement Units (PMU). Current transformers and potential transformers – principle working, ratio and phase angle errors – numerical problems, Clamp on meters.	9	15%
IV	Magnetic Measurements: Measurement of flux and permeability - flux meter - hall effect Gaussmeter - BH curve and permeability measurement - hysteresis measurement- ballistic galvanometer - principle- determination of BH curve - hysteresis loop. Lloyd Fisher square — measurement of iron losses Measurement of rotational speed using proximity sensors and optical sensors.	9_	15%
V	SECOND INTERNAL EXAMINATION DC & AC potentiometers - General Principle - calibration of ammeter, voltmeter and wattmeter using potentiometer. AC Bridges: Maxwell's bridge- Schering bridge and Wien's bridge Oscilloscopes – Basic principle of signal display - Block diagram and principle of operation of general purpose CRO - vertical deflecting system - horizontal deflection system - basic sweep generator - XY mode and Lissajous patterns - applications of CRO - dual trace oscilloscope. digital storage oscilloscope	9	20%
VI	Transducers - Definition and classification - common transducers for measurement of displacement, velocity, flow, liquid level, force, pressure, strain and temperature - basic principles and working of LVDT, electromagnetic and ultrasonic flow meters, piezoelectricforce transducer, load cell, strain gauge- bridge configuration for four strain gauges, RTD, Thermistors, thermocouple, Need for instrumentation system, data acquisition system.	9	20%
	END SEMESTER EXAM		

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI. Student has to answer all questions. (8 x5)=40 **Part B**: 3 questions uniformly covering modules I&II Student has to answer any 2 questions: (2 x 10) =20

Part C: 3 questions uniformly covering modules III&IV Student has to answer any 2 questions: (2 x 10) =20

Part D: 3 questions uniformly covering modules V&VI Student has to answer any 2 questions: $(2 \times 10) = 20$

Course Number	Course Name	L-T-P	Credits	Year of introduction
HS200	Business Economics	3-0-0	3	2016

Course Objectives

- To familiarize the prospective engineers with elementary Principles of Economics and Managerial Economics;.
- ➤ To acquaint the students with tools and techniques that are useful in their profession in Managerial Decision Making which will enhance their employability;
- To gain understanding of some Macroeconomic concepts to improve their ability to understand the business climate;
- > To prepare and understand balance sheet at an elementary level.

Syllabus

Nature of economics. Demand and Supply Analysis, demand curve, supply curve and equilibrium price determination. Production economics, economies of Scale, optimal quantity determination, Production and Cost functions, the law of Diminishing Marginal Productivity, Costs, Break-Even Analysis Chart Preparation and Cost-Volume-Profit Analysis. Market Structure and Price-Output Decisions under various competition situations and Collusion/Cartel formations in the real life situation. Monetary theory, functions of RBI and NI. Computation and some aspects of macro economics. Capital Budgeting decisions, forecasting techniques and elementary Balance Sheet..

Expected Outcome

A student who has undergone this course

- would be able to make investment decisions based on capital budgeting methods in alignment with microeconomic and macroeconomic theories.
- would be able to analyse the profitability of the firm, economy of operation, determination of price under various market situations with good grasp on the effect of trade cycles in business.
- would gain knowledge on Monetary theory, measures by RBI in controlling interest rate and emerging concepts like Bit Coin.
- would gain knowledge of elementary accounting concepts used for preparing balance sheet and interpretation of balance sheet

TT •4		Course Plan				
Unit	Topics	Hours Allotted	Percentage Marks			
Ι	Nature of Economics Definitions of Economics and their limitations, Economic Problems (2 Hrs.), Economic Systems, meaning of Business or Managerial Economics (2 Hrs.)and its role and relevance in managerial decision making in an industrial setting (2 Hrs).	6	15%			
II	Demand and Supply Analysis Demand Curve, Demand function (2 Hrs.), Elasticity of demand and its estimation (2 Hrs.), Supply curve, equilibrium price and price mechanism (2 Hrs).	6	15%			
	FIRST INTERNAL EXAM					
III	Production Economics Economies of Scale and Diseconomies of Scale (1 Hr.), Production and Cost Functions. Factors of Production (2 Hrs.), Law of Diminishing marginal Productivity. Construction and analysis of Break Even Charts (3 Hrs.)	6	15%			
IV	Market Structure and Price-Output Decisions Price and output determination under Perfect Competition, Monopoly and Monopolistic Competition (3 Hrs.). Collusion and Cartel, Nash Equilibrium (3 Hrs.).	6	15%			
	SECOND INTERNAL EXAM					
V	Money, National Income and Taxation Money, Emerging Bit Coin concept, Quantity Theory of Money, Interest Rate Management (2 Hrs), Open Market Operations by RBI, Selective Credit Controls, SLR, CRR (2 Hrs), Definition & Measurement of National Income, methods, sectors of economy (3 Hrs), inflation, deflation, trade cycles- Value- Added Tax (2 Hrs).	9	20%			
VI	Investment Decisions and Balance Sheet Analysis Capital Budgeting, Investment Analysis – NPV, IRR, Profitability Index, ARR, Payback Period (3 Hrs), Depreciation, Time value of money. Business Forecasting– Elementary techniques (2 Hrs). Balance sheet preparation principles and interpretation (4 Hrs) END SEMESTER EXAM	9	20%

Course No.	Course Name	L-T-P-Credits	Year of Introduction
EE232	Electrical Machines Lab - I	0-0-3-1	2016
Course Objectiv	/es		
To learn the w	vorking and testing methods of DC mac	chines and transformers	
List of Exercises	s/Experiments:	KALAN	1
Part A – DC Ma		GICAI	
1 Open circuit c	haracteristics of DC shunt generator	TTV	land"
Objectives:	naracteristics of DC shull generator	Y	
U	mine the OCC at different speeds	7.4 4 A	
	ne the critical field resistance		
-	naximum voltage built up with given sh	unt field resistance	
	pritical speed for a given shunt field resi		
	OC shunt generator		
Objectives:	C		
U	ne the external & internal characteristic	s	
b) Deduce	the armature reaction curve		
3. Load test on D	C compound generator		
Objectives:			
/	ne the external characteristics <mark>c</mark> umulativ	*	
	ne the external characteristics different	ial compound condition	1
4. Brake test on l	DC shunt motor		
Objectives:			
	lowing characteristics		
,	ency Vs Output		
,	current Vs Output		
· •	ed Vs Output Estd.		
	ed Vs Torque		
5. Brake test on l			
Objectives:	De series motor		
	lowing characteristics		
	ency Vs Output 2014		
	current Vs Output		
	ed Vs Output		
/ 1	d Vs Torque		
ý 1	current Vs Torque		
,	est on a DC shunt machine		
Objectives:			
0	ne the armature current and percentage	efficiency when the m	achine operates as a
motor and	as a generator for various load conditio	ns and plot efficiency V	Vs output curves.
-	est on a pair of DC machines		
Objectives:			
Determinat	tion of the efficiency of the given dc sh	unt machine working a	s a motor and

_	
Ī	generator
	under various load conditions.
	8. Retardation test on a DC machine <i>Objectives:</i>
	a) Separation of hysteresis, eddy current, friction & windage losses
	b) Find the moment of inertia of the rotating system
	9. Separation of losses in a DC shunt motor
	Objectives:
	a) Separation of hysteresis, eddy current, friction & windage losses
	b) Plot the losses vs speed curves
	Part B – Transformers
	10. O.C. & S.C. tests on the single phase transformer
	Objectives:
	Predetermination of the following
	a) Efficiency at different load conditions and different power factors
	b) Regulation at different load conditions and different power factors
	c) Equivalent circuit referred to HV and LV sides
	d) UPF load at which efficiency is maximum
	e) Power factors at which regulation is maximum and zero
	f) Regulation vs. power factor curves
	11. Load test on the single phase transformer
	Objectives:
	a) Determination of the efficiency at different load conditions and unity power factor
	b) Determination of the regulation at different load conditions and unity power factor
	c) Plot efficient vs. output & regulation Vs output curves
	12. Separation of losses in a single phase transformer <i>Objectives:</i>
	Separate the hysteresis & eddy current losses at different voltages & different frequencies
	keepingV/f constant & plot losses vs. frequency curves. Hence
	i) Separate the hysteresis & eddy current losses at normal voltage & different
	frequencies &
	plot losses vs. frequency curves 510
	ii) Separate the hysteresis & eddy current losses at normal frequency & different
	voltages &
	plot losses vs. voltage curves.
	13. Sumpner's test
	Objective:
	a) Predetermination of efficiency at different load conditions and power factors
	b) Predetermination of regulation at different load conditions and power factors
	c) Plot efficiency vs. output & regulation vs. power factor curves
	d) Obtain the equivalent circuit referred to LV & HV sides
	14. Scott connection of single phase transformers
	Objectives:
	Determine the efficiency at different load conditions when
	a) Main transformer alone loaded
	b) Teaser transformer along loaded
	c) both transformers loaded under balanced conditions
l	d) both transformers loaded under unbalanced conditions
1	e) Plot efficiency vs. output curves for each case.

 15. Parallel operation of single phase transformers Objectives: a) To determine the load sharing of each transformer by their equivalent impedances b) To verify the load sharing by actual measurements 16. Three phase connection of single phase transformers 						
a) To determine the load sharing of each transformer by their equivalent impedancesb) To verify the load sharing by actual measurements						
b) To verify the load sharing by actual measurements						
16. Three phase connection of single phase transformers						
Objectives:						
a) Determine the polarity of single phase transformers						
b) Connect three single phase transformers in star-star configuration						
c) Connect three single phase transformers in star-delta configuration						
d) Determine the transformation ration in the above cases						
17. O.C. & S.C. tests on the Three phase transformer						
Objectives:						
Predetermination of the following						
a) Efficiency at different load conditions and different power factors						
b) Regulation at different load conditions and different power factors						
c) Equivalent circuit referred to HV and LV sides						
18. Load Test on V connected Transformers						
Objectives:						
Connect two single phase transformers in V-V connection and conduct a load test to plot the						
efficiency curve.						
Out of the above experiments, minimum twelve experiments should be done in lab taking at						
least six experiments from both Part A and Part B.						
Expected outcome:						
After the successful completion of the course, the students will be able to test and validate DC						
After the successful completion of the course, the students will be able to test and validate DC						
After the successful completion of the course, the students will be able to test and validate DC generators, DC motors and transformers						
generators, DC motors and transformers						
M NO.						
generators, DC motors and transformers After the successful completion of this course, the students will be able to						
generators, DC motors and transformers After the successful completion of this course, the students will be able to 1. Analyse the characteristics of different dc generators						
 generators, DC motors and transformers After the successful completion of this course, the students will be able to 1. Analyse the characteristics of different dc generators 2. Separate the losses in dc motors - 5 						
 generators, DC motors and transformers After the successful completion of this course, the students will be able to 1. Analyse the characteristics of different dc generators 2. Separate the losses in dc motors 3. Analyse the performance of different types of dc motors

2016

Course No.	Course Name	L-T-P - Credits	Year of Introduction					
EE234	CIRCUITS AND MEASUREMENTS LAB	0-0-3-1	2016					
Course Object								
To deve	elop measurement systems for various electrical cir	cuits and syste	ems and to use					
differer	t transducers for measurement of physical variable	es.						
List of Exercis	ses/Experiments : (18 experiments are listed, out of	of which 12 exp	periments are					
mandatory).	ADI ADIDITI IZA	TAKA						
	APIABDI KA	AM						
	n of Superposition Theorem in dc circuits.	- 11 VI						
	tion of Thevenin's Theorem in dc circuits.							
	etermination of impedance, admittance, power factor and real/reactive/ apparent power							
	LC series/parallel circuits.	\vee						
	wer measurement using one wattmeter and two-wa							
	Determination of B-H curve, μ -H curve and μ -B curve of an iron ring specimen.							
	ent of voltmeter and ammeter resistances using Wh		ge and Kelvin's					
	double bridge and extension of range of voltmeters and ammeters Measurement of self/ mutual inductance and coupling co-efficient of iron cored coil							
and air-cored coil.8. Calibration of meters and measurement of unknown resistance using slide- wire								
potentiome								
-	of single phase energy meter by direct and phanto	m loading at v	arious power					
factors.	er eingte plante energy meter of an ere and plante							
	of 3-phase energy meter using standard wattmeter							
	of wattmeter using Vernier dial potentiometer							
12. Measurement of capacitance using Schering Bridge.								
 Extension of instrument range by using Instrument transformers(CT and PT) Characteristics of Thermistor, RTD, and Thermocouple Characteristics of LVDT. Characteristics of strain gauge/ Load cell. 								
					17. Measurement of energy using electronic Energy meter/TOD meter			
						asurement using Clamp on meter		
					Expected Out			
	letion of the course student will be able to:		1					
	e RLC circuits and coupled circuit to obtain the vo		elations					
	DC netwok theorems by setting up various network te the single phase and three phase energy meter at		fagators					
	e power in a single and three phase circuits by vari		laquois					
	ine magnetic characteristics of iron ring specimen	ous memous						
	e high and low resistances using various bridges							
	eter							
Text Book:	ectronic energy meter, TOD meter and clamp on m							
	AK: A course in Electrical and Electronic Measure	ments & instru	imentation,					
Dhanpat F								
-	: A course in Electrical & Electronic Measuremen	t & Instrument	ation., S K					
Kataria &								
3. Kalsi H. S.	, Electronic Instrumentation, 3/e, Tata McGraw Hill, N	ew Delhi, 2012
