C192045

a)	Establish the inequality of Clausius (
b)	Determine the maximum work obtainable from two finite bodies at temperature	(6)						
	T_1 and T_2 . What are the causes of entropy increase?							
a)	Derive expression for useful work for a steady flow system which interacts only							
	with the surroundings.							
b)	Calculate the decrease in exergy when 25 kg of water at 95°C mix with 35 kg of	(5)						
	water at 35°C, the pressure being taken as constant and the temperature of the							
surroundings being 15° C (c _p of water = 4.2 kJ/kg K)								
	A vessel of volume 0.04 m ³ contains a mixture of saturated water and saturated							
	steam at a temperature of 250°C. The mass of the liquid present is 9 kg. Find the							
	pressure, the mass, the specific volume, the enthalpy, the entropy and the internal							
	energy							
PART C								
a)		(5)						
,	(1) Avogadro's Law (2) Equations of State							
b)	Express the changes in internal energy and enthalpy of an ideal gas in a	(5)						
	reversible adiabatic process in terms of the pressure ratio.							
a)	Define Virial Expansion. Also explain Law of corresponding state.	(6)						
b)	Explain Van der Waals equation of state. How does it differ from the Ideal gas	(4)						
	equation of state?							
a)	State and explain Amagat's law of partial volumes of a gas mixture	(5)						
b)	A mass of 0.25 kg of an ideal gas has a pressure of 300 kPa, a temperature of 80°C, and a volume of 0.07 m ³ . The gas undergoes an irreversible adiabatic process to a final pressure of 300 kPa and final volume of $0.10m^3$, during which work done on gas is 25 kJ. Evaluate the c_p and c_v of the gas and the increase in entropy of the gas.	(5)						
a)	Derive Maxwell's equation	(5)						
b)	Define Volume expansivity and isothermal compressibility	(5)						
	Explain Joule - Kelvin effect. What is the significance of inversion curve?	(10)						
a)	Define adiabatic flame temperature. How is it estimated?	(5)						
u)								
	 b) a) b) 	 b) Determine the maximum work obtainable from two finite bodies at temperature T₁ and T₂. What are the causes of entropy increase? a) Derive expression for useful work for a steady flow system which interacts only with the surroundings. b) Calculate the decrease in exergy when 25 kg of water at 95°C mix with 35 kg of water at 35°C, the pressure being taken as constant and the temperature of the surroundings being 15°C (c_p of water = 4.2 kJ/kg K) A vessel of volume 0.04 m³ contains a mixture of saturated water and saturated steam at a temperature of 250°C. The mass of the liquid present is 9 kg. Find the pressure, the mass, the specific volume, the enthalpy, the entropy and the internal energy PART C Answer any four full questions, each carries10marks. a) Define the following: (1) Avogadro's Law (2) Equations of State b) Express the changes in internal energy and enthalpy of an ideal gas in a reversible adiabatic process in terms of the pressure ratio. a) Define Virial Expansion. Also explain Law of corresponding state. b) Explain Van der Waals equation of state. How does it differ from the Ideal gas equation of state? a) State and explain Amagat's law of partial volumes of a gas mixture b) A mass of 0.25 kg of an ideal gas has a pressure of 300 kPa, a temperature of 80°C, and a volume of 0.07 m³. The gas undergoes an irreversible adiabatic process to a final pressure of 300 kPa and final volume of 0.10m³, during which work done on gas is 25 kJ. Evaluate the c_p and c_v of the gas and the increase in entropy of the gas. a) Derive Maxwell's equation b) Define Volume expansivity and isothermal compressibility Explain Joule - Kelvin effect. What is the significance of inversion curve?
