APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
Seventh semester B.Tech examinations (S), September 2020

Course Code: EC409

Course Name: CONTROL SYSTEMS
Max. Marks: 100   Duration: 3 Hours

PART A
*Answer any two full questions, each carries 15 marks.*   Marks

1 a) Compare open loop and closed loop system with suitable examples.   (5)

   b) Find the transfer function using Mason's gain equation   (10)

2 a) Determine the rise time, peak time, settling time and peak overshoot of a second order control   (5)
       system subjected to a unit step input. The damping ratio = 0.5 and undamped natural
       frequency $w_n = 6\ rad/sec$.

   b) Derive an expression for rise time of a second order system.   (5)

   c) Derive an expression for time response of a second order under damped system to step input.   (5)

3 a) Find the transfer function of the given system using block reduction technique   (10)
b) The block diagram of a unity feedback (negative) system is shown in figure. Determine the (5) steady state error for unit ramp input when K=400. Also determine the value of K for which the steady state error to unit ramp will be 0.02

PART B
Answer any two full questions, each carries 15 marks.

4 a) Comment on the stability of the system whose characteristic equation is given by (5)
$s^5+2s^4+3s^3+6s^2+2s+1=0$.

b) A unity feedback control system has an open loop transfer function (10)
$G(s)=K(s+9)/ s(s+3)(s+5)$.Sketch the root locus.

5 a) Compare PI,PD and PID controllers. (5)

b) Sketch the bode plot for the following transfer function and determine phase margin and gain (10)
margin. $G(s) = \frac{75(1+0.2s)}{s(s^2+16s+100)}$.

6 a) Draw the Nyquist plot for the system whose open loop transfer function is (8)
$G(s)H(s) = \frac{K}{s(s+2)(s+10)}$. Determine the range of K for which the closed loop system is stable.

b) Describe the design procedure of a lag compensator. (7)

PART C
Answer any two full questions, each carries 20 marks.

7 a) A linear system representation in state space is given as (5)
$$X = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 0 & -2 & -3 \end{bmatrix} X + \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix} r$$
$$y = \begin{bmatrix} 2 & 2 & 2 \end{bmatrix}$$
Apply Kalman's test to find whether the system is completely observable.

b) A system is represented by the differential equation $y''+3y'+2y = r''+2r'+2r$.Obtain a state (7)
model in controllable canonical form. Draw the state diagram.

c) Obtain the state model for the given transfer function (8)

$$\frac{Y(s)}{U(s)} = \frac{1}{s^2 + s + 1}$$

8 a) Explain the procedure of jury test. (5)

b) The input-output relation of a sampled data system is described by the equation (7)

$c(k+2)+3c(k+1)+4c(k)=r(k+1)-r(k)$. Determine the z-transfer function.

c) Determine the state transition matrix of A=$\begin{bmatrix} 0 & 1 \\ 0 & -2 \end{bmatrix}$ (8)

9 a) An electrical network is shown in fig. a Select asset of proper state variables and write down a state equation, in physical-variable form, to represent the system (10)
b) For the sampled data control system shown if Fig, find the response to unit step input where (10)

$G(s)=\dfrac{1}{(s+1)}$ T-1 sec

****
