Reg No.:____

Name:

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSI

Fourth Semester B.Tech Degree Supplementary Examination June 2023 (2019 Scheme

Course Code: MAT 206 Course Name: GRAPH THEORY

Max. Marks: 100

Duration: 3 Hours

Marks

3

3

3

PART A

(Answer all questions; each question carries 3 marks)

- Prove that sum of the degrees of all vertices in G is twice the number of edges in 3
 G.
- 2 Define pendant vertex, isolated vertex, and null graph with an example.

3 Define Ring Sum of G_1 and G_2 .

Find the ring sum of the following graphs

Define arbitrarily traceable graphs. Give an example.

Find the maximum number of vertices possible in a 3-level binary tree. Also find 3 the maximum height possible in a binary tree with 11 vertices.

Label the vertices of the following graph with their eccentricities and hence find 3 •
 the diameter and centre of the graph.

4

5

6

02000MAT206052103

-

7	Show that every cut set in a connected graph must contain at least one branch of every spanning tree of $G_{\mathbf{k}}$	3
8	Show that K_5 is not planar.	3
9	Define Incidence Matrix. List four properties of it.	3
10	Show that every tree with two or more vertices is 2-chromatic.	3

PART B

(Answer one full question from each module, each question carries 14 marks)

Module -1

7

7

- 11 a) Show that a simple graph with **n** vertices must be connected if it has more than 7 $\frac{(n-1)(n-2)}{2}$ edges.
 - b) Are the following graphs isomorphic? Justify your answer.

- 12 a) A simple graph with **n** vertices and **k** components can have at most (n-k)(n-k+1)/2 edges.
 - b) Show that in any group of two or more people, there are two always with exactly 7 the same numbers of friends inside the group.

Module -2

- 13 a) Prove that a given connected graph is an Euler graph if and only if all vertices of 7 the graph are of even degree.
 - b) Prove that a connected graph is Euler if and only if it can be decomposed into 7 circuits.
- 14 a) Nine members of a new club meet each day for lunch at a round table. They decide 7
 to sit such that every member has different neighbours at each lunch. How many
 days can this arrangement last? Justify your answer

02000MAT206052103

b) If G is a simple graph with **n** vertices and $d(v) \ge n/2$ for each v, then G is 7 Hamiltonian.

Module -3

15 a) Show that a Tree with n vertices has exactly n-1 edges.
b) Prove that every tree has either one or two centres.
7
16 a) Find the shortest distance from B to G using Dijkstra's Algorithm.
2

b) Find the minimum spanning tree using Prim's algorithm.

Module -4

7

17 a) A connected planar graph G with n vertices and e number of edges has f = e - n + 2 regions or faces.
b) For any graph G, prove that vertex connectivity ≤ edge connectivity ≤ 2e/n 7
18 a) Every circuit has an even number of edges in common with any cut set. 7
b) Find a spanning tree and hence find all fundamental cut sets, associated with it, of 7 the following graph.

7

7

7

19 a) If d_{max} is the maximum degree of vertices in a graph, then show that chromatic number of $G \le d_{max} + 1$

b) Find the chromatic polynomial of the following graph.

- 20 a) If A(G) is is an incidence matrix of a connected graph G with n vertices, then show that rank of A(G) is n-1.
 - b) Check whether the graph having following adjacency matrix is connected or not. 7
