

Reg No.: \_\_\_\_\_

Name: \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

B.Tech Degree S3 (R) (FT/WP) Examination November 2025 (2024 Scheme)

**Course Code: PBCST304****Course Name: OBJECT ORIENTED PROGRAMMING**

Max. Marks: 40

Duration: 2 hours 30 minutes

**PART A***(Answer all questions. Each question carries 2 marks)*

- |   |   | CO  | Marks |
|---|---|-----|-------|
| 1 | What is the role of the Just-In-Time (JIT) compiler in the Java Virtual Machine (JVM)? Explain how it improves the performance of Java programs during execution.   | CO1 | (2)   |
| 2 | What is the output of this code snippet and the value for n after the execution of this code?<br><code>int n = 29; // binary 11101<br/>System.out.println(n &gt;&gt; 1);<br/>System.out.println(n &gt;&gt;&gt; 1);<br/>System.out.println(~n);</code>   | CO1 | (2)   |
| 3 | What is the output of the program, justify your answer.<br>// Base class (Parent)<br><code>class Animal {<br/>    Animal() {<br/>        System.out.println("Animal constructor called");<br/>    }<br/>    void sound() {<br/>        System.out.println("Animals make sounds");<br/>    }<br/>}<br/>// Derived class (Child)<br/>class Dog extends Animal {<br/>    Dog() {<br/>        super();<br/>        System.out.println("Dog constructor called");<br/>    }<br/>    void sound() {<br/>        System.out.println("Dog barks");<br/>    }<br/>}</code> | CO2 | (2)   |

```
// Main class
public class InheritanceDemo {
    public static void main(String[] args) {
        Dog d = new Dog(); // Object of subclass
        d.sound();          // Calls overridden method
    }
}
```

- |   |   |         |
|---|---|---------|
| 4 | Explain the use of the <b>final</b> keyword in Java.  | CO2 (2) |
| 5 | What is a package in Java? Explain its advantages and types with suitable examples.   | CO3 (2) |
| 6 | Differentiate interfaces and abstract classes with examples   | CO4 (2) |
| 7 | How would you design a user registration GUI application that saves data to a database? Provide the Model-View-Controller (MVC) diagram representing this design. | CO5 (2) |
| 8 | Compare Java AWT and Swing.   | CO5 (2) |

### PART B

*(Answer any one full question from each module, each question carries 6 marks)*

#### Module -1

- |    |  |         |
|----|--|---------|
| 9  | <p>a) Write a Java program to create an <b>array of Student objects</b>. Each student has the following attributes:</p> <p style="margin-left: 40px;"><b>Name</b> (String)<br/> <b>RegNo</b> (String)<br/> <b>Marks</b> of 3 subjects(double)</p> <p>The class should include:</p> <ol style="list-style-type: none"> <li>1. A <b>parameterized constructor</b> to initialize all attributes.</li> <li>2. A <b>default constructor</b> that assigns default values.</li> <li>3. A method <code>display()</code> to print the details of each student.</li> </ol> <p>In the <code>main()</code> method,</p> <p style="margin-left: 40px;">Create an array of 3 Student objects.<br/> Use both the <b>default</b> and <b>parameterized</b> constructors to initialize the objects.<br/> Display the details of all students.</p> | CO2 (4) |
|    | b) Explain encapsulation and polymorphism with examples.   | CO1 2   |
| 10 | a) Explain Arithmetic and Bitwise operators of Java with sufficient examples   | CO1 4   |
|    | b) Explain the access specifiers of Java. How access specifiers help in achieving data hiding in Java?   | CO2 2   |

#### Module -2

- |    |   |       |
|----|---|-------|
| 11 | Write a Java program to demonstrate inheritance with the use of constructors.<br>The program should have the following class structure: | CO2 6 |
|----|---|-------|

**Class 1: Bank (Superclass)****Attributes:**

- bankName (String)
- branch (String)

**Constructor:**

- Parameterized constructor to initialize the above attributes.

**Method:**

- displayBankDetails() — displays bank name and branch.

**Class 2: SBAccount (Subclass of Bank)****Attributes:**

- accountHolder (String)
- balance (double)

**Constructor:**

- Parameterized constructor to initialize all attributes (including superclass attributes using super()).

**Method:**

- displaySBDetails() — displays complete Savings Account details.

**Class 3: CurrentAccount (Subclass of Bank)****Attributes:**

- accountHolder (String)
- balance (double)

**Constructor:**

- Parameterized constructor to initialize all attributes (including superclass attributes using super()).

**Method:**

- displayCurrentDetails() — displays complete Current Account details.

**Main Class: BankDemo****In the main() method:**

- Create objects for both SBAccount and CurrentAccount.
- Display their details.

- |    |    |   |     |   |
|----|----|---|-----|---|
| 12 | a) | Write a Java program to demonstrate Runtime Polymorphism using method overriding. | CO2 | 4 |
|    | b) | What is the use of keyword <i>Super</i> . Give example.                           | CO2 | 2 |

**Module -3**

- |    |   |     |   |
|----|---|-----|---|
| 13 | Write a Java program to create a package named College that contains a Student class with the following specifications:<br>The Student class should have: | CO3 | 6 |
|----|---|-----|---|
- Attributes: name (String), rollNumber (String), grade (char)
  - A parameterized constructor to initialize all attributes
  - A method displayInfo() that displays all student details
  - A method calculateGradePoint() that returns grade points (A=10, B=8, C=6, D=4, F=0)

Create a `MyClass` class in the default package that:

- 1.Imports the `College` package
- 2.Creates 2 Student objects
- 3.Displays their information and grade points

Show the complete directory structure, compilation, and execution steps.

- |    |    |   |     |   |
|----|----|---|-----|---|
| 14 | a) | Differentiate between <b>checked</b> and <b>unchecked</b> exceptions in Java. Give suitable examples for each type.                                       | CO3 | 2 |
|    | b) | What is exception handling in Java? Explain the following keywords with suitable examples:<br>(i)try and catch<br>(ii)throw<br>(iii)throws<br>(iv)finally | CO4 | 4 |

#### Module -4

- |    |    |  |     |   |
|----|----|--|-----|---|
| 15 | a) | Write a Java program using <b>Swing components</b> to create a simple " <b>Login</b> " <b>window</b> . | CO5 | 4 |
|----|----|--|-----|---|

The application should have the following:

- Two labels: **User ID** and **Password**
- Two text fields to input User ID and Password
- One button labeled **Submit**
- One label named **Status** (initially blank)

When the user clicks the **Submit** button, the status label should display "**Welcome**".

- |    |    |  |     |   |
|----|----|--|-----|---|
|    | b) | Discuss any two java swing components.   | CO5 | 2 |
| 16 | a) | What are the steps to connect to a database using JDBC? Explain with an example program. | CO5 | 4 |
|    | b) | How does the Delegation Event Model work in Swing applications?                          | CO5 | 2 |
